@JAKO.FRAMES · SETUP FOR EVERYONE WHO COMMENTED AGENTS

Who are *they?*

How I made a cinematic 3D Blender reel where my Mini Me meets my 5 Claude agents in the Dolomites. Claude wrote the script, built the scene in Blender, mixed the audio and added subtitles. Every prompt I used is below. Copy them and swap in your own character and story.

`1080 × 1920` `24 fps` `49.6 s` `1 190 frames` `14 shots`

`EEVEE · ~30 s / frame`

What you *need*

Claude Code
The desktop app or CLI. It runs the agents, writes the Blender scripts and does the audio work.

Blender 4.5 LTS
Free. I used the portable build, so nothing gets installed system-wide.

Blender MCP add-on
Lets Claude control Blender live. blender-mcp runs on port 9876.

ElevenLabs
Two voices, one for me and one for Claude. You can also make the sound effects here.

ffmpeg
Joins the rendered frames and the audio into one mp4.

Remotion
Optional. Adds speech-bubble subtitles on top of the final video.

You also need a character sheet of your mascot (front, back and a few faces) and one reference reel whose style you like.

The *process*

01

Hire the 5 agents

Each agent is one markdown file in `.claude/agents/`. Claude Code reads the description and gives each agent the tasks that fit it. I asked for a team that waits until I need it.

PROMPT

```
Set up an agent team that stays ready and only works when I need
it. Start with 5 agents, each one leading its own team: planner,
analyst, caption-writer, video-director, trend-scout. If a team
needs a new helper, it can ask for one.

Then build their office. Location: the foothills of the
Dolomites, Italy. A modern open-roof office on a green meadow
with only computers and laptops, where the 5 agents work. Make it
something I can move around in.

Make the agents cute little characters with an alien antenna on
top, each one a different color.
```

EXAMPLE AGENT FILE · .CLAUDE/AGENTS/CAPTION-WRITER.MD

```
---
name: caption-writer
description: Writes my Instagram captions, hooks and hashtags.
color: orange
---
You are my copywriter. Short sentences, casual tone, one clear
CTA.
```

The lazy way: type `/agents` in Claude Code and it builds the file with you.

02

Show Claude the style

Before writing anything, I gave Claude one reel to study for look and quality.

PROMPT

```
First, watch this reel and study its style, quality and pacing:
[paste reel link]
```

03

The main prompt: characters, place and dialogue

I attached my character kit (a zip with Jako and Claude) and wrote the whole story at once. This is the prompt that made the reel.

MAIN PROMPT

[attach your character kit]
This kit has Claude and Jako. Write a script for them.

Use the agents we already set up and make a 3D Blender animation (a cartoon) in the same style as the reel I showed you.

Put our office in the video, at the same quality it has now. Weather: alpenglow, sunset, fog, beautiful. The agents are chilling, as they should.

The video starts like this. You stand next to me and I say "Who are they?"
Then cut to the agents chilling. You're the character from the photo I sent.
You: "They're your agents."
Me: "Whaaat?"
Claude: "Yes, they're your agents. This one is planner..." You name all of them while the camera shows each one chilling. These shots go by very fast.
Me: "What is this place?"
Claude: "This is Italy, Dolomites."
Me: "Why Dolomites?"
Claude: "'Cause you love this place."
While they talk, show the surroundings: mountains, trees, meadow.
Me: "What are they doing?"
Claude: "They're just chilling now."
Me: "Why?"
Claude: "Because there's no task. If you ask them to do something, they'll come to the office."
Me: "Really?"
Claude: "Yes. Call 'em."
Me: "Come to the office!"
Now they gather at the office one by one.
Claude: "They're working on your project now. You don't need to do anything."
Me: "Ohhh, so this one is planning, this one is analysing, yes?"
Claude: "You're right."
Me: "Oh, that's how my agents work together."
Claude: "Everything is for you."
Me: "Thank you. Let's relax."
At the end the two of us walk toward a campfire. The camera films from behind, then cinematically cranes up to the sky.

```
Vertical video. I'm a bit bigger in frame. You walk next to me
like a pet and answer me. My character's sunglasses stay pushed
up on the head the whole time.

Add sound effects: campfire, crickets, nature, trees, birds, soft
in the background. Make it cinematic.

You can't do voices yet, so write all the lines with emotions.
I'll make them in ElevenLabs and send you the audio, and you put
it in order.
```

FOLLOW-UP

```
Keep my lines fully separate from yours, so I send only two mp3
files and you split them yourself. Also shorten the lines so the
video is 40–50 seconds.
```

04

Record two voice files

- Make one mp3 for each character with all of that character's lines in order. Put a `[long pause]` between lines.
- Claude splits the files on the silences and matches the pieces to lines J01–J11 and C01–C10.
- If both voices sound alike, change one of them. I swapped Claude's voice for a clearer, younger one and the timeline stayed the same.

MIX PROMPT

```
[attach both mp3s]
Make my voice sound natural. Keep Claude's voice exactly as I
sent it, no effects. Add only a light echo on "Come to the
office!". Add the nature SFX. Use the video-director agent.
```

05

Build the scene in Blender

Open Blender with the MCP add-on running. Claude writes one Python script per part of the scene. A single `run_all.py` rebuilds the whole scene in about 8 seconds, so every fix is cheap to redo.

SCRIPT	BUILDS
01_world.py	Meadow, pines, peaks, valley fog, alpenglow sky
02_office.py	Open-roof office, desks, screens
03_jako.py	The main character, matched to the character sheet
04_claude.py	Small orange voxel buddy with a laptop
05_agents.py	5 antenna aliens, one color each
06_cameras_shots.py	14 cameras and cuts, locked to the audio timeline
07_render_settings.py	EEVE, 1080 × 1920, 24 fps
08_preview_stills.py	Small 540 × 960 test frames to check before the full render

PROMPT

```
Blender is open and MCP is on. Run run_all and show me preview
stills. Do everything yourself, I don't have time.
```

06

Fix the character until it matches

The first version didn't look like my character, so I kept giving short feedback until it did. Compare every still with the character sheet.

FEEDBACK I USED

```
Quality is good, but my character doesn't look like this. The
hair is parted to both sides, why did it come out like this?

It came out oval. Make it round, exactly like the picture.

Make it like the very first version, but the hairstyle should be
curtain bangs falling in front.
```

07

Render overnight

The full render took about 10 hours at about 30 seconds per frame. It runs inside Blender on your own computer, so it uses no Claude tokens. Claude set up a small watcher script that keeps the PC awake, restarts the render if it stops, and builds the mp4 at the end.

RESUME A STOPPED RENDER (SKIPS EXISTING FRAMES)

```
blender.exe -b blender\reel.blend -x 1 -a
```

FRAMES + AUDIO → MP4

```
ffmpeg -framerate 24 -i renders\frame_%04d.png -i
audio\mix_preview.wav -c:v libx264 -crf 16 -pix_fmt yuv420p -c:a
aac -b:a 320k -shortest out\reel.mp4
```

08

Add subtitles over the speaker

Claude got each character's screen position from the Blender cameras and placed a speech bubble above whoever is talking. Most people watch muted, so do this step.

PROMPTS

```
Add subtitles that show who is speaking. Put each subtitle above
or next to that character.

Don't animate them hard. I don't want them to pull attention.
Keep them simple.

Remove the name labels, keep the lines short, and keep them
static in one spot near the speaker.
```

Shot *list*

TIME	SHOT	LINE
0:00	Low shot from behind on a meadow ridge, glowing peaks behind	“Who are they?”
0:03	Low angle on Claude, Jako towering above	“Your agents.”
0:05	Close-up, eyes go wide, slight push-in	“Whaaat?”
0:06	Fast cuts with whip-pans, about 1.2 s each, one agent per cut	Claude names all 5
0:13	Medium two-shot, Jako looks around	“What is this place?”
0:15	Drone orbit over fog, pines and the pink Sassolungo peak	“Italy. Dolomites.”
0:20	Two-shot, then a slow pan across the peaks	“Why Dolomites?” / “’Cause you love it here.”
0:24	Two-shot, agents out of focus behind them	Q&A: chilling, no task
0:33	Low hero angle, hands cupped, echo	“Come to the office!”
0:35	Antennas perk up, agents run in, screens light up	SFX only
0:40	Slow dolly along the desks	“They’re on your project now.”
0:47	Warm close-up, smile	“Everything is for you.”
0:51	They walk to the campfire, camera cranes up to the first stars	“Thank you. Let’s relax.”

The *agents*

AGENT	CHILLING AS
planner	Swinging in a hammock with a paper calendar
analyst	Lying on the grass counting stars
caption-writer	Scribbling in a notebook on a bench
video-director	Filming the sunset with a tiny camera
trend-scout	Looking at the peaks through binoculars

Sound *effects*

SOUND	WHERE
Wind in pines, distant birds, far cowbells	Under the whole video
Crickets at dusk	Fade in as the light drops
Campfire crackle	Last shot, rises to the end
Whoosh × 5	Whip-pans between the agents
Cute pop × 5	Each antenna perks up
Small footsteps on grass, chairs	Agents run to the office
Screen “bloop” × 5	Monitors turn on
Soft keyboard typing	Agents at work

Tips that *saved me*

- Lock the audio first. Build the camera cuts on top of the voice timing, not the other way round.
- Check small preview stills before you start the 10-hour render.
- Ask Claude to keep a `STATUS.md` with what's done and what's next. If you hit your usage limit, it picks up from there next time.

- Rendering costs no tokens. Start it before bed.

> Questions? Drop them under the reel. The most-asked one becomes the next video.
